

# ETL Project - National Parks

Group 3: Teena Stewart, Derek Volz, Paul Enestvedt, Joe Sellner, Melissa Kamanzi

# Data Sources

**National Park Trails** : Kaggle - <https://www.kaggle.com/planejane/national-park-trails>

**Biodiversity in National Parks**: Kaggle (Includes parks and species datasets) - <https://www.kaggle.com/nationalparkservice/park-biodiversity>

**US National Parks Visitation 1904 - 2016 (with boundaries)**: Data World - <https://data.world/inform8n/us-national-parks-visitation-1904-2016-with-boundaries/discuss/national-parks-totals-by-year/q44tenrr>

# Transformation

## Pandas/ Jupyter Notebooks / SQLAlchemy (common methods)

- `import pandas as pd`
- `from sqlalchemy import create_engine`
- `visitors_df = pd.read_csv(visitors_file)`
- `rename(columns={'Name': 'name', 'age': 'age', 'Date': 'date'})`
- `species_df.reset_index(drop=True)`
- `connection = "postgres:postgres@localhost:5432/national_parks_db"`
- `engine = create_engine(f'postgresql://{connection}')`
- `df.to_sql(name='', con=engine, if_exists='append', index=True)`

# Transformation (Challenges)

## Bear Attacks

- `'age': 'age',`
- `bear_attacks_df['location'].str.contains('National Park', case=True, regex=False)`
- `in_parks_df['location'].str.split(',').str[0]`

## Visitation

- `YearRaw - Non-numeric 'Total' value`
- `Unit Type - Also contained national monuments and forests`

# Transformation (Challenges)

## Park Trails

- Removed data where trail is not located in National Park
- Ensured park name consistency with master park list
- Cells containing multiple values

# Transformation (Normalization)
